

# CARPE Symposium

## Porto, 2025

### ENCARE – Enhancing Capacities of UAS staff for more successful EU-funded Research

ENCARE aims to strengthen and expand the competences of researchers and science support staff at European UASs for the successful development and application of EU-funded projects by developing and implementing a cross-university capacity building program (ICER-Pro) to foster skills development.

The capacity building program ICER-Pro (Interdisciplinary & Collaborative Education and Research Program) comprises three modules:

- Engaging in the EU funding environment (yellow module)
- Crafting EU grant applications (blue module)
- Developing impact through research and partnership (purple module)

During the CARPE 2025 Symposium selected sessions of these modules will be conducted.
